RadioGPS triggering application

Automatic file address by GPS positioning system suitable for large open space, big squares or natural park.

Example of use of HappyGuide with GPS module for the visit of a square with different places of interest:

GPS module accessory displays distance when approaching the entered point, then select the file ready to be listened when reaching the place.

Tourist group application

Automatic triggering by radio signal from the audioguide transmitter managed by the hostess of the group.

All the HappyGuides of the group are triggered simultaneously to the addressed file. The language will be the one chosen by the single tourist.

This application helps organization of multilanguage tourists group with only one interpreter.

The radio signal include an identification number for the group: many groups can stay very close without any interference.
